EDUCATION

University of Texas at Dallas

Master of Science in Computer Science

Richardson, TX

Expected May 2027

University of Texas at Dallas

Bachelor of Science in Software Engineering

Richardson, TX

December 2024

RELEVANT EXPERIENCE

AI Consultant Intern

May 2026 – Present

IBM

Austin, TX

- Creating an AI agent using LangGraph and Python to unify ticket data across SAP and ServiceNow, leveraging historical context to deliver automated resolution suggestions and priority flags
- Building a reporting dashboard using React, Next.js, and PostgreSQL to automate weekly client deliverables, eliminating manual PowerPoint workflows and cutting overhead by 40%
- Coordinating client discovery sessions to translate business requirements into technical specifications that shape engineering work each sprint
- Tracking cross-functional deliverables and milestones in monday.com, giving senior consultants real-time visibility into engagement progress

Problem Design Engineer

January 2026 – Present

Idler (YC25)

Remote (Part-time)

- Authoring edge-case test suites and complex coding problems in Python and Java to benchmark LLM code-generation accuracy and identify subtle logic vulnerabilities
- Reviewing code across OOP and scripting stacks to maintain quality standards and test coverage prior to benchmark deployment

Software Engineer Intern

June 2024 – August 2024

Blackhawk Network

Coppell, TX

- Automated incident ticket escalation workflows in Python on ServiceNow, reducing manual intervention and cutting average response time by 20%
- Built custom Splunk and New Relic dashboards to track real-time system health and identify infrastructure bottlenecks
- Documented 100+ incident tickets and resolution procedures in ServiceNow, establishing standardized troubleshooting logs for team audit readiness

PROJECTS

Tennis Analysis System | *Python, PyTorch, YOLOv8, Pandas*

- Engineered a computer vision pipeline to track tennis players and ball movement with 95% accuracy across 10,000+ video frames
- Optimized dataset preprocessing and keypoint extraction to enable real-time movement analysis, including player and ball speed calculations

Document Security and Prompt Scanner | *Java, React, Spring Boot, Gemini API, SQLite*

- Architected a dual-layer security engine using regex heuristics and the Gemini LLM API to detect hidden prompt injections and jailbreaks across PDF text and embedded images
- Developed a full-stack application for uploading documents, triggering scans, and surfacing flagged results in real time

Kubernetes Resource and Cost Monitor | *Python, Kubernetes, Prometheus, OpenCost, Docker*

- Developed an automated pipeline that queries container resource metrics from Prometheus and maps them against pricing models to flag over-provisioned Kubernetes workloads
- Designed an interactive interface translating cluster resource deltas into efficiency reports, surfacing an estimated 20% in potential cost savings

TECHNICAL SKILLS

Languages: Java, Python, C#, C/C++, SQL, JavaScript, HTML/CSS

Frameworks & Libraries: React, Next.js, Node.js, Spring Boot, .NET, REST APIs, LangGraph, PyTorch

Developer Tools & Infra: PostgreSQL, SQLite, Docker, Kubernetes, Prometheus, AWS (EC2, Lambda), Git, Splunk, New Relic, Github Actions
