EDUCATION

University of Texas at Dallas

Master of Science in Computer Science

August 2025 – May 2027 (Expected)

Richardson, TX

University of Texas at Dallas

Bachelor of Science in Software Engineering

December 2024

Richardson, TX

RELEVANT EXPERIENCE

AI Consultant Intern

IBM

May 2026 – August 2026

Austin, TX

- Built the document-analysis module for a due diligence agent using Python and LangChain's deepagents framework, extracting financials, contract terms, and comparables against a structured checklist to auto-generate diligence reports and replace a multi-hour manual review per deal
- Created a reporting dashboard using React, Next.js, TypeScript, and PostgreSQL to automate weekly client deliverables, eliminating manual PowerPoint workflows and reducing prep time by 40%
- Deployed the team's first production AI agent to IBM Cloud using Terraform, authoring IaC modules for provisioning and environment configuration
- Translated client business requirements into technical specs during sprint planning and stand-ups, tracking deliverables in monday.com for real-time engagement visibility

Problem Design Engineer

Idler (YC25)

January 2026 – Present

Remote (Part-time)

- Authored edge-case test suites and complex coding problems in Python and Java to benchmark LLM code-generation accuracy and identify subtle logic vulnerabilities
- Reviewed 50+ code submissions across OOP and scripting stacks to maintain quality standards and test coverage prior to benchmark deployment

Software Engineer Intern

Blackhawk Network

June 2024 – August 2024

Coppell, TX

- Automated incident ticket escalation workflows in Python on ServiceNow, reducing manual intervention and cutting average response time by 20%
- Built custom Splunk and New Relic dashboards to track real-time system health and identify infrastructure bottlenecks
- Documented 100+ incident tickets and resolution procedures in ServiceNow, establishing standardized troubleshooting logs for team audit readiness

PROJECTS

Document Security and Prompt Scanner | *Java, React, Spring Boot, Gemini API, SQLite*

[GitHub](#)

- Architected a dual-layer security engine using regex heuristics and the Gemini LLM API to detect hidden prompt injections and jailbreaks across PDF text and embedded images
- Developed a full-stack application for uploading documents, triggering scans, and surfacing flagged results in real time

Kubernetes Resource and Cost Monitor | *Python, Kubernetes, Prometheus, OpenCost, Docker*

[GitHub](#)

- Developed an automated pipeline that queries container resource metrics from Prometheus and cross-references them against pricing models to flag over-provisioned Kubernetes workloads
- Built an interactive dashboard visualizing cluster resource deltas over time, turning raw metrics into actionable efficiency reports for engineering review

Tennis Analysis System | *Python, PyTorch, YOLOv8, Pandas, OpenCV*

[GitHub](#)

- Engineered a computer vision pipeline to track tennis players and ball movement with 95% detection rate across 10,000+ video frames
- Optimized dataset preprocessing and keypoint extraction to enable real-time movement analysis, including player and ball speed calculations

TECHNICAL SKILLS

Languages: Java, Python, C#, C/C++, SQL, JavaScript, TypeScript, HTML/CSS

Frameworks & Libraries: React, Next.js, Node.js, Spring Boot, .NET, REST APIs, LangGraph, LangChain, PyTorch

Developer Tools & Infra: PostgreSQL, SQLite, Docker, Kubernetes, Terraform, Prometheus, AWS (EC2, Lambda), IBM Cloud, Git, Splunk, New Relic, GitHub Actions
